

Re: HR 4026

I oppose HR 4026. The XM weather and traffic services provide an additional on-air listening option for citizens. I listen to both XM and local radio, AM and FM. I love my XM Satellite Radio channels, but it has not replaced, nor will it replace, my local AM, FM radio stations. Local information, news, weather, events, and regional music still draw my interest. There remains something personal about local radio which satellite radio can not provide.

Allow them both to provide a broad range of services. There is room in the world to co-exist.

Thank you.
